

CAMPUS CAFÉ SALES ANALYSIS REPORT

1. Project Overview

This project analyzes simulated sales transaction data from a campus café to evaluate product performance, category contributions, profitability, and customer payment methods.

2. Objectives

- Evaluate total sales revenue, profit, units sold, and total transactions.
- Identify top-performing products by volume, revenue, and profit.
- Compare revenue across product categories (Beverages, Food, Snacks).
- Analyze customer payment preferences (UPI vs. Cash).

3. Dataset Summary

- Total Transactions: 100
- Total Units Sold: 679
- Total Revenue: ₹35,320
- Total Profit: ₹17,487
- Top Revenue Date: 18-09-2026

4. Key Findings & Insights

- Volume vs. Revenue: Samosa led in total units sold, while Cold Coffee generated both the highest revenue and highest profit.
- Top Category: Beverages was the highest revenue-generating category, driven largely by Cold Coffee sales.
- Payment Preferences: UPI was the dominant payment method, reflecting a heavy preference for cashless digital payments among campus customers.
- Healthy Margin: The café generated ₹17,487 profit on ₹35,320 revenue, establishing a ~49.5% overall profit margin.

5. Conclusion

To grow profitability further, the café should prioritize promoting high-margin items like Cold Coffee while offering bundled deals (e.g., Cold Coffee + Samosa) to leverage high snack sales volume.
